## 6.25MWh

### Energy Storage System

The Jinko ESS 6.25 MWh energy storage system leverages our latest liquid-cooled technology and high-capacity 588 Ah LiFePO<sub>4</sub> cells to achieve industry-leading energy density, safety, and efficiency. Engineered for grid-scale applications, it maximizes storage capacity and long-term reliability in a standardized 20-foot container layout.

#### Intelligent Liquid Cooling for Thermal Stability

Features a serpentine multi-parallel flow channel design that maintains a cell temperature difference of less than 2.5°C. Multiple cooling control modes optimize thermal management and reduce auxiliary system power consumption.

#### Enhanced System Efficiency

Implements a rack-level energy management scheme, increasing RTE (Round-Trip Efficiency) by over 1%. Integrated with active balancing technology to boost available charge/discharge capacity by 5%.

#### Comprehensive Safety Architecture

Equipped with five-tier protection from cell to system level to prevent thermal runaway. Combines gas detection and water-based fire suppression in a hybrid explosion-proof system for enhanced hazard containment.

#### Smart O&M & Flexible Deployment

Intelligent control system streamlines commissioning and lowers operational costs. Supports flexible placement configurations (back-to-back or side-by-side) to maximize energy density and adapt to site layout.

## Solar-Storage Integration

Seamlessly combine solar PV generation with energy storage to optimize self-consumption, maximize renewable utilization, and ensure a continuous, stable power supply.

## Grid Support Services

## Energy Market Participation
